**SOLUTION:** When power from a remote commander 9 is interrupted, a control section 6 reads channel selection information of a broadcast enterprise 1 of a channel selection information memory 10 and sets it to a channel selection section 2. At the same time, the control section 6 gives an instruction to a separate section 4 for separating program reception related information. The control section 6 extracts information to receive and identify the program list information among the received information and makes a channel reception instruction to the channel selection section 2 and a program list information separation instruction to the separation section 4. Then the received and separated program list information is stored in a program list information memory 11 as the program list information of the broadcast enterprise 1. The control section 6 similarly conducts the reception and storage of program list information memory of a
